

Diff Break-In Machine

MM-DBMK Diff Break-In Machine Black

MM-DBMB Diff Break-In Machine Blue

MM-DBMP Diff Break-In Machine Purple

The Diff Break-In Machine is a device that can quickly and effectively break-in your new ball differential.

1. Prepare your car just as you would do for racing, then simply connect this device to your car's wheel nut, connect the input clips to a 12V power supply. While holding the tire on the other side, turn the switch on to spin the wheel forward, let the diff sit properly for 10 to 30 seconds.

2. Repeat the process for the other side to make it well balanced. After the break-in process is complete, you will feel the diff is smoother than it was when newly built.

It will increase the life time and efficiency of the diffs as well as help deliver consistent lap times.

- Powerful 12V 540 size motor equipped.
- Two-way switch for quick change of direction.
- Available in three colors; black, blue and purple.
- Hex arbour fits most current touring cars.
- Perfect height of hex arbour for Muchmore touring car stand (#MT-MS)
